**KERFKORE COMPANY INTRODUCES ENVIRONMENTALLY FRIENDLY
FLEXGREEN FOR CURVED ARCHITECTURAL PANEL APPLICATIONS**

Kerfkore Company, a manufacturer of patented bendable substrates and panel products, introduces FlexGreen, an environmentally friendly product that can be used for architectural radius applications as vast as one's imagination. It offers designers, specifiers, and manufacturers a quality bendable product that can help qualify for LEED credits that's better for the environment and one's health.

FlexGreen is an ideal product for producing stable curved architectural panels. The face, core, and glue used contain no added formaldehyde so the entire product is a NAF (no added formaldehyde) material. The face is made from Eucalyptus fiber hardboard attached to a "green" particleboard substrate core that is made from 100% recovered and recycled fiber. FlexGreen can contribute to LEED credit points for MR 4.1, MR 4.2, and EQ 4.4.

Environmentally friendly FlexGreen allows for traditional fabrication methods of attaching to a rigid structure and then application of face material. It is designed to bend down to a 10" radius prior to face lamination. Due to its stable hardboard face, it is possible to laminate a single-ply veneer or other thin architectural materials directly to the hardboard face by use of a cold or hot press prior to bending. This process will result in a bending radius of approximately 16". It can also be formed into a freestanding curved part by attaching a backing sheet to the open rib side while in the desired shape. FlexGreen is available in a choice of sizes, 4 X 8, 8 X 4, 4 X 10, and 10 X 4 all X ¾" thickness.

A curved, light brown cardboard strip is centered against a solid black background. The strip is slightly curved, with the top edge being more pronounced than the bottom. The text "FlexGreen" is printed in a clean, white, sans-serif font across the middle of the strip. The "F" is capitalized and larger than the other letters, and the "G" is also capitalized and larger than the other letters. The overall appearance is that of a product label or a piece of packaging material.
