New stocks of fire-rated particleboard

Kerfkore Company now stocks FR (fire-rated) particleboard in response to strong customer demand for this type of core product. Applications are vast and include architectural uses that require some fire-rated material for offices and public buildings, restaurants, schools, hospitals, hotels, malls, airports, and more.

FR particleboard allows Kerfkore Company to produce 5/8-in.- and 3/4-in.-thick Kerfkore plus 3/4-in.-thick Timberflex and Flexboard. The Kerfkore product is 100% class A with only the user's face material to be added. Flexboard enables the user to apply veneer directly to the face while flat with a hot or cold press and then bend down to a 16-in. or 18-in. radius.
