FlexGreen From Kerfkore Company

Kerfkore Company, a manufacturer of patented bendable substrates and panel products, now offers FlexGreen, an environmentally friendly product that can be used for radius applications as vast as one's imagination. It offers designers, architects, contractors, specifiers, and manufacturers a quality bendable product that is better for the environment and one's health.

FlexGreen is an ideal product for producing stable architectural panels. The face, core, and glue used contain no added formaldehyde so the entire product is free of any added formaldehyde. Formaldehyde, a colorless, pungent-smelling gas, can cause watery eyes, burning sensations in the eyes and throat, nausea and difficulty in breathing in some people. The face is made from FSC certified Eucalyptus fiber hardboard attached to a particleboard substrate core that is made from 100% recovered and recycled fiber. FlexGreen contributes to LEED credit points for MR 4.1, MR 4.2, and EQ 4.4.

Environmentally friendly FlexGreen allows for normal fabrication methods of attaching to a rigid structure and then application of face material. It is designed to bend down to a 10" radius prior to lamination. Due to its stable hardboard face, it is possible to laminate a single-ply veneer or other thin materials directly to the hardboard by use of a cold or hot press. This process will result in a bending radius of 16" and 18". FlexGreen is available in a choice of 48" X 96", 96" X 48", 48" X 120", and 120" X 48" size, all X 3/4" thickness, and it weighs just 2.4 lbs. per square foot.
