

Painted Foamkore

A finished lightweight product that is ready for use.

Painted Foamkore panels are available with painted faces on one or two sides.

Painted Foamkore is available in a nominal panel size of 4qX 8q with overall thickness options available from 3/4+ up to 3+. Special Order sizes include 4qX 10q and 4qX 12q.

Optional custom sizes in width and length are available based on quantity requirements. Check with factory for more details.

Weight reduction of 66% for 3/4+ material and up to 90% weight reduction for other thicker material is obtainable when compared to particle board or MDF panels.

Panels are available with an optional internal frame of MDF or solid lumber. Solid edges allow for conventional attachment methods to be used.

Foamkore, a balanced constructed panel with greatly reduced weight, is now available with a painted fiberboard face standard in black and white.

Optional colors are available based upon quantity requirements.

Face material is 1/8+ fiberboard with a UV cured painted surface for superior durability.
