Just Imagine: *Lightweight + Bendable*

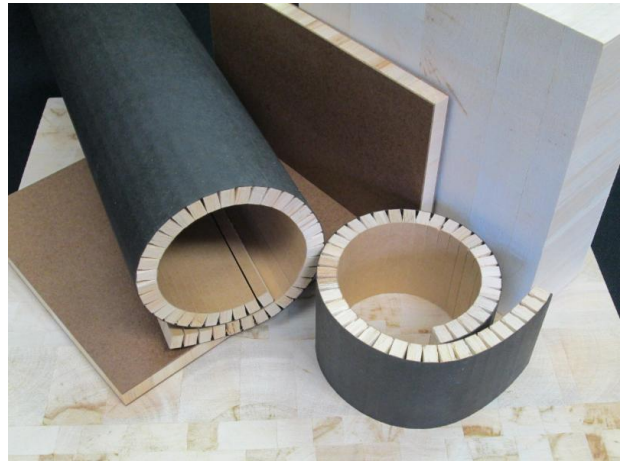

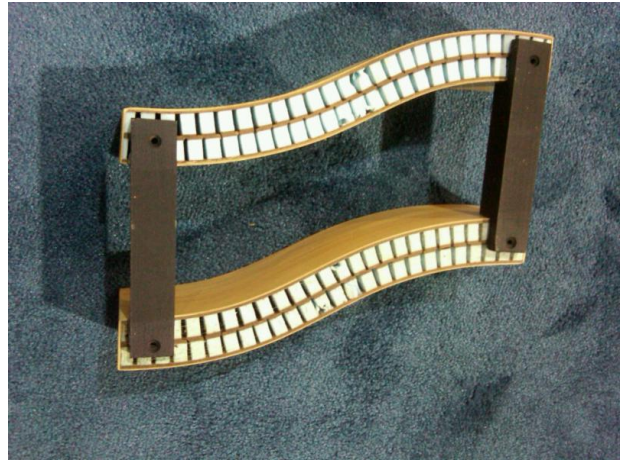

Imagine being able to offer your customers lightweight panels which can either be purchased or fabricated to bend. How would such a blended feature open more sales and services options for your customers?

Most of you are familiar with our particleboard core *bendable* panels (SK, TF, FB) but did you know that we offer lightweight core options as well?

Our flat, lightweight *Foamkore* is also available in a 3/4" kerfed version. Better yet, your customer can post-kerf *Foamkore* in their own shop (select faces only).

View attached images and consider project options for designers and fabricators. What supportive products and decorative surfaces do you have to offer which can compliment these project types whether for backdrops, face materials, supportive hardware, adhesives or other structural materials?

Refer to our September 2017 newsletter for other lightweight project options using our product lines.

Lightweight + Bendable Options:

Foamkore Bendable Options:

- **Foamkore 3/4" with Hardboard faces:** factory post-kerfed (special order)
- **Foamkore with Hardboard faces:** fabricator cut, fabricator discretion

Bendable Line Lightweight Options (Kerfkore, Timberflex, Flexboard):

- Balsa core
- Poplar ply core
