Now Offering Oversized Panels of Foamkore

Kerfkore Company can now provide customers with up to 5X12 sizes of Foamkore panels. These larger sizes will provide more design flexibility at a much reduced weight from standard materials.

Foamkore consists of a balanced constructed foam board that provides a structural panel with greatly reduced weight. It consists of a polystyrene foam core and thin face materials. Panels are available with an optional internal frame of MDF or solid lumber. Solid edges allow for conventional attachment methods to be used.

Weight reductions of up to 80% are realized when compared to conventional panels of plywood, particle board, and MDF. Face materials standard for oversized panels are 1/8" MDF up to 5X12 and .080 Hardboard up to 4X12. Other face materials such as veneer, laminates, paper, and painted may be available upon request.

Foamkore oversized panels are available in thicknesses ranging from 3/4" up to 3". Foamkore is also available as a FSC certified product when using the Hardboard face.
